CTC Awarded \$1.68M Contract by Air Force Research Laboratory for Intelligence Operations

JOHNSTOWN, PA - Congressman John P. Murtha announced today at the annual Showcase for Commerce that Concurrent Technologies Corporation (CTC) has been awarded a contract worth \$1.68M over 15 months from the Air Force Research Laboratory (AFRL) to apply innovative technologies to collect and process ELectronic Signals INTelligence (ELINT) and their associated SIGnals INTelligence (SIGINT) information.

The objective of this effort is to enable net-centric knowledge sharing for dynamic, actionable intelligence operations. CTC employee experts in Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) will develop and test techniques that will improve internal communications, as well as means to communicate externally with the Global Information Grid. This will accelerate the operational use of machine intelligence in SIGINT processing so that analysts can focus on real-time threats as they arise and let the routine tasking be processed and sorted for later review.

"This award to CTC was based on a number of criteria, including the overall scientific and/or technical merit of the proposal, the potential contributions of the effort to the mission and overall research and development program of AFRL, and the consideration of past and present performance of CTC on recent government contracts," stated Daniel R. DeVos, President & CEO of CTC.

CTC is an independent, nonprofit, applied research and development professional services organization providing innovative management and technology-based solutions to a wide array of clients representing state and federal government as well as the private sector. Established in 1987, CTC operates from more than 35 locations with a staff of 1,500 employees.
